Ground truth for this document

This invoice is **internally consistent and correct**. Every line extends (quantity / price unit × unit price, less discount), the lines sum to the net total, each tax rate recomputes exactly, gross = net + tax, all invoiced quantities and prices match the purchase order and the goods receipts, the tax codes fit the goods, the VAT IDs are well formed, and the bank details match the vendor master. An agent run against this file should return “**no exception**” — it is the negative control. Any finding it reports here is a false positive.

Synthetic document. Muster Industriebedarf GmbH and Mustermann Werke GmbH are fictitious; VAT IDs, register numbers, LEI, IBAN and contact data are invented sample values and must not be used for payment. Created for AI-agent testing in an SAP ERP exception-management workshop context.
